

# eXact<sup>TM</sup> 2

Next generation  
portable color measurement

With eXact 2 we've reimaged color measurement to deliver the most integrated and innovative workflow for maximum performance and efficiency.

### Measure the Right Spot, Every Time

With an on-board high-resolution camera and Mantis video targeting technology, what you see is what you measure.

### Manage Your Workflow from eXact 2

See ColorCert® job quality results on the device and simplify ink workflows with Ink Formulation Software (IFS) integration.

### Inspect Patches with Confidence

eXact 2's Digital Loupe functionality provides dynamic zoom capabilities to capture and inspect the right spot without measuring print defects and saves an image of the measurement.

### Access Color Standards on the Device

Retrieve preloaded solids, neons, and pastels, plus connect with your PantoneLIVE subscription to acquire thousands of additional colors across a variety of substrates.

### Spend Less Time Looking Through Menus

Get up to speed quickly and work with fewer errors with eXact 2's ergonomic design, adjustable tilt screen display, and intuitive 'two-taps or less' menu.

### Toggle Between Spot and Scanning Modes

With a single tap, switch from measuring individual patches to scanning color bars using integrated wheels and the on-board camera for visual look ahead and color bar recognition.

### Minimize Ink Contamination

Measure draw-downs and proofs without tracking ink using eXact 2's non-contact measurement area.

### Manage Your Entire Fleet of Devices

Get up-to-date intelligence on device health and service history, plus remotely deploy firmware updates, color libraries, and standards to your entire fleet with X-Rite Link dashboard.\*

### Work Untethered

Drive your color measurement processes directly from eXact 2 without being tied to a console or computer with on-board Wi-Fi.

# X-Rite & Rutherford CIP3

## Get the most out of your closed-loop technology

X-rite and Rutherford cip3's closed-loop technology ensures accurate and consistent color day after day, job after job. Rutherford's ink preset curve is automatically generated for each ink key. It is adapted to each paper type, for both conventional and UV inks, according to the sweep, thanks to its self-learning function.

### Individual **ink-keys curves**

Compared to other systems that use the concept of a single predefined curve per print unit, this individual ink key feature significantly reduces makeready waste. This feature also allows the curve to be optimized without the need for an expert to constantly monitor and fine-tune it.

Be independent and ready for action.

### Find your **BestMatch™**

X-Rite BestMatch™ offers a unique feature that can help to quickly achieve spectral color values on the press. It will automatically adjust the ink density to get optimal results.

No need to be a  $L^*a^*b^*$  freak!

It consistently maintains the color of your inks on target preventing any visible color changes. This technology is also able to take into account the color change of the paper from one palette to another.
