SP O32 CS

SPOCS, the Sheet Plant Operation Control System, has been helping run Sheet Plants of all sizes in the UK since 1989.

This system addresses all of the administrative needs of a sheet plant from enquiry to invoicing and covers all the stages in between.

- It is designed and written by people who know and have worked in the industry. It talks your language, it knows what you want from a computer system.
- The system is highly configurable and able to adapt to every company needs.

Training, implementation and technical support are provided by our dedicated team of engineers located in our office in Surat, backed up by the engineers in our office in the UK.
We aim for excellence in customer service and complete client satisfaction.

SP O32 CS

Sheet Plant Operation Control System

The Premier Management Information System for Corrugated Sheet Plants

PalletScan 2

PalletScan 2 is a mobile application operated from a Windows tablet in conjunction with a wireless barcode scanner.

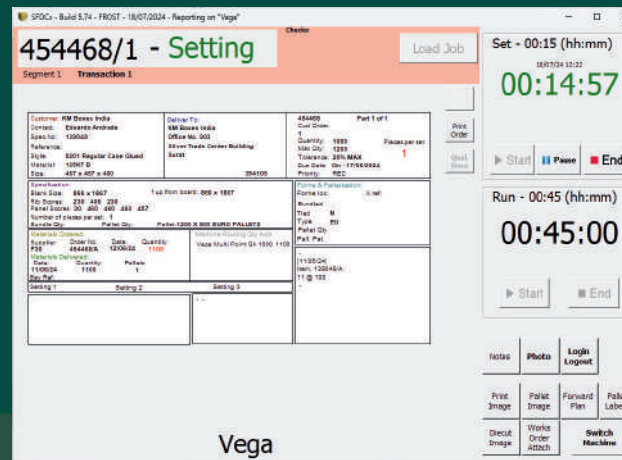

Finished stock is tracked from creation to despatch simply by scanning the pallets during normal operations.

With PalletScan2 stock quantities are always correct, stock values are always correct, and every pallet is traceable.

Shop Floor Data Collection

The SFDCx module provides machine performance data and put wastage under the microscope instantly, in real-time, using touchscreens and barcode readers. Control production more efficiently, save money and provide a batter service to your customers.

Corrugator Scheduling

Our proprietary algorithm is fast and precise, allowing the user to identify different cutting stock scenarios, with trim optimisation and impressive waste reduction.

S32Plan

Single Data Entry
The SPOCS32 Planner uses data entered into the main system and updates in real time when changes are made (e.g. new orders, board booked in).

Complete Overview
A clear, graphical visualisation of production, with no limit to forward planning.

Easy to Use
Drag-and-drop to move jobs, right click to pin or edit a job.

Capacity Planning
Capacity is calculated in real time as orders are entered. The sales team can instantly see if they can fit in that last-minute order.

Early Warning
Intelligent highlighting draws attention to job status (e.g. live, late, board arrival).
